Title: Photon Fury

Author: Iron Bob

Build: Remake of my old car

Speed: 31 mph Rookie, 37 mph Advanced, 41 Pro

Class: Rookie,Advanced and Pro

Description:

Photon Fury is a remake of my old Photon 5 car. It comes with three parameter sets and nine different paint schemes. Three are included on the Rookie version, three on the Advanced version and three on the Pro version. The paint schemes are compatible with all three parameter sets but you'll have to rename them before you move them to a different folder. There is also a paint kit included for anyone wanting to repaint the car. Most of the paint kit is in Paint.net PDN files. Currently each parameter version is in it's own folder, eventually I'd like to see a parameter file switch in RVGL similar to the paint scheme switch we have now. If this ever gets implemented I will update this car to utilize it.

Install: unzip to your RVGL directory

Legals:

You may distribute this file intact by any means available. Any distribution of this file must also include this readme file unedited. You may NOT distribute edited versions of this car without prior authorization and proper credit for the work done. All repaints of this car are welcome and encouraged.

Thanks for trying my car

Iron Bob
